Signing in — the studio door

The atelier signs in through a discreet door: [/studio](#). It is not linked from the public navigation. Bookmark it for daily use.

Never share the studio URL with clients; direct them to *Account* instead.

Your first password change

Your account was created with a temporary password. On first sign-in the system routes you to *Change password*. You cannot access any admin page until this is complete — this is by design.

Step 01

Sign in with the temporary password we sent you.

Step 02

Choose a new password (min. 12 characters).

Step 03

You are then taken to the Dashboard.

Managing collections & launches

Collections have three states — *draft*, *coming soon*, *live*. Coming-soon collections may hold a *launch_at* timestamp; when present, a countdown appears publicly.

Scheduling a launch

1. Open Admin → Collections.
2. Set status to *coming soon*.
3. Pick a launch date & time in Harare time.
4. Add hero image and a short teaser.

At launch, flip status to *live*; the countdown replaces itself with the collection grid.

Managing products

The rules of publishing

A product may go live only when it has *1 to 6 photographs* and a *description*. Photos come from the Media Gallery; use the picker rather than pasting URLs.

AI Refine

The *Refine with AI* button rewrites rough notes into VEZA's editorial voice: calm, British spelling, no marketing verbs. Always read and edit before saving.

Pricing: set both 9k gold and sterling silver prices in metadata. The site shows the appropriate one based on the client's metal choice.

The Media Gallery

Bulk upload

Drop up to 30 images at a time. The gallery *deduplicates* by SHA-256, *compresses* to WebP client-side (~85% quality), and stores everything in the *gallery* bucket.

Alt text

Fill alt text on every image. It is used on product pages, in the newsletter, and for social sharing.

Orders & abandoned checkouts

Admin → Orders lists all incoming orders and requests. Each row shows subtotal, shipping, courier, and status. Update status as the piece moves through the studio.

Abandoned checkouts

The *Abandoned* tab shows carts that reached checkout but weren't completed. Reach out gently — do not pressure.

Shipping rate tables

Shipping rates are held per *courier* × *region*. The checkout quote uses the lowest-priced eligible courier for the buyer's country. Edit rates in Admin → Settings → Shipping.

Insurance thresholds and delivery windows sit alongside each rate.

Commission inbox

Custom submissions from the site arrive here. Each carries the client's brief, references, and contact details. Reply directly from the row; the reply is sent by email and archived.

Analytics

The Analytics view surfaces the essentials: page views, product views, add-to-carts, orders created, commissions submitted. It is deliberately quiet — no vanity metrics.

Newsletter & calendar

Composing

Admin → Newsletter opens the composer. Paste rough notes and press *Draft with AI*: VEZA voice, 220–380 words, in blocks. Add images from the Gallery. Save the draft; live-preview updates on the right.

Sending

Once Resend is configured, *Send* distributes to the private list. Until then, use *Export HTML* and *Export subscribers CSV*.

Calendar

The Calendar shows launches, drafts, scheduled and sent letters, and the monthly reminder. Set your *preferred send day* and the reminder banner appears on the Dashboard if you're overdue.

Payments (Stripe activation)

Admin → Settings → Payments holds the Stripe publishable key and the *payments enabled* toggle. The Stripe secret key must be added as a backend secret; the studio never stores it in the browser.

Turn payments on only after a successful test in Stripe's test mode.
